

DIGITAL PUMP MANAGER and DIGITAL PUMP CONTROLLER

Digital Control Panel is the safest protection system for the pump motors. It is a micro processor based digital system. The advanced design ensures absolute reliability for the entire life of the pump at an affordable cost. It's fail-proof operation results a longer life for the pump.

Even a well designed and manufactured pump may fail due to electrical and mechanical problems in the site. These problems will generally result in over or under current in the circuit. These values can be set to suit the individual site conditions. These setting parameters can be locked with digital code lock.

Applications

- Domestic, Agricultural and Industrial pumps.
- Sump and bore well pumps.
- Sewage and dewatering pumps
- Pumps installed in Individual houses, high raise buildings, hospitals, hotels, etc.,

Features

- ❖ Available in 1 Ph and 3 Ph Models.
- ❖ Digital Display of actual motor current, set parameters and type of fault.
- ❖ Easy setting of parameters at the site itself.
- ❖ Simple code lock for the settings.
- ❖ Easy to install.
- ❖ Can be programed for effective water supply even in low yield bores.
- ❖ Built in contactor. Separate starter is not necessary.
- ❖ Instantaneous overload protection.
- ❖ Single phasing protection.
- ❖ Dry run protection.
- ❖ Over Head tank level control.
- ❖ Cyclic On and Off timer.
